

## Can I Monitor Chromebooks Using SoftLINK?

### Summary

I have several carts of Chromebooks for my school. We currently use SoftLINK in our computer labs to monitor what the students are doing. Will SoftLINK monitor Chromebooks as well?

### Details

SoftLINK gives you the capability to monitor and remotely control Chromebooks. SoftLINK works hand-in-hand with School for Google Chrome. Using your SoftLINK Tutor Console, you will be able to do the following:

- View a crystal clear thumbnail of each student machine in a single view
- Click on a thumbnail to discreetly view screen activity on a selected Chromebook.
- Remote Control. As well as discreetly monitoring the students screens (Watch Mode), teachers can interact with the students' desktops with real time remote control (Share Mode). Ideal for providing 1:1 help and support to students as needed.
- Broadcast teacher's screen to student desktops
- Send an instant survey or request for feedback to each student and display results in real-time
- Send an attention-grabbing message or instruction to each student machine
- Block all Internet access - Launch a website on the Student Chromebook - Close a website on Chromebook
- See details of the website that students are currently viewing
- Ask students to register at the start of each lesson
- Teacher can open a discussion session with selected or all students, enter their comments and share with the rest of the class
- Lock the student's mouse and keyboard when instructing

When using the proper client package, the SoftLINK Tutor console is capable of connecting to any of the following devices/operating systems simultaneously. This eliminates the need to use a different interface in different environments.

- Windows
- OS X
- Linux
- Android
- iOS
- Chrome
