

## How Many Computers Can I Connect to my LINK System?

### Summary

We are currently expanding our computer lab from 16 to 24 workstations. How many computers can be connected to my LINK System if I want to expand my lab even further?

### Details

The LINK System can be connected to virtually any number of student workstations. Applied Computer Systems, Inc. (ACS) has yet to find a classroom size that has not worked with the LINK System. Many classrooms that we install LINK Systems in have between 16 and 30 workstations. However, ACS has installed classrooms consisting of as few as 2 student workstations or as many as 60+. Contact a sales representative to ask them about your classroom configuration if you are concerned about expandability.
