

Cannot deploy SoftLINK to a Windows XP or Windows 2000 workstation from a Windows 7 workstation in a workgroup environment

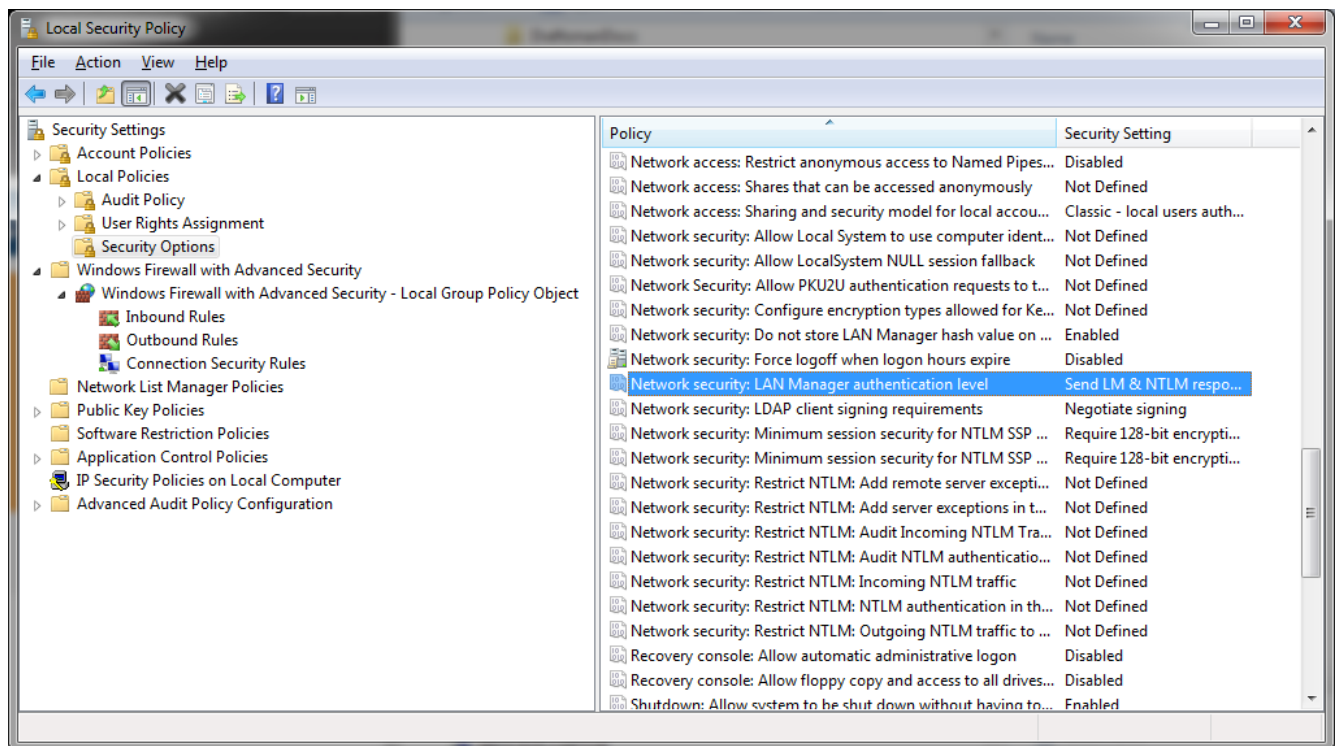

Summary

When you try to deploy a SoftLINK Package from a Windows 7 workstation to a Windows XP or 2000 workstation that is in a Workgroup you will be prompted to enter a Username and Password of an account that has administrator rights to the machine. However, the user details will not be accepted and the SoftLINK Deploy tool will again prompt for a Username and password.

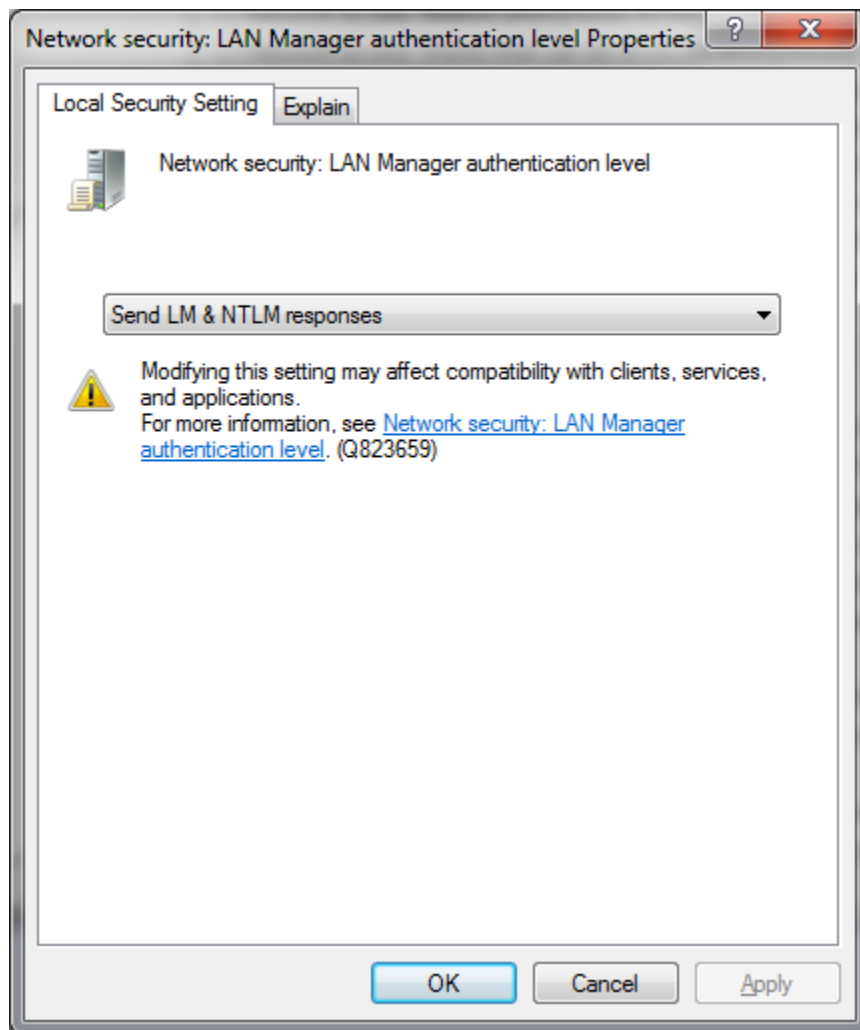

Details

In order to Deploy the SoftLINK Package correctly using a Windows 7 workstation, please perform the following steps on the Windows 7 machine:

- 1 – Open the Control Panel
- 2 – Select Administrative Tools
- 3 – Select Local Security Policy
- 4 – When the Local Security Policy window opens, select Local Policies
- 5 – Under the Local Policies, select Security Options
- 6 – Locate and right-click on “Network Security: Lan Manager Authentication level”

7 – Select Properties. On the “Local Security Setting” tab, change the dropdown box to read “Send LM & NTLM Responses”.

8 – Select OK. You now should be able to use SoftLINK Class Control Deploy to deploy SoftLINK to your client workstations.
